

VISIA provides a breakthrough for complexion renewal & maintenance

Your complexion is the window through which your image is projected to the world. VISIA Complexion Analysis provides the information necessary for truly individualized facial rejuvenation and skin care regimens matched to your unique complexion profile.

multi-spectral imaging and analysis for optimal results

A VISIA imaging session uses multi-spectral imaging and analysis to capture key visual information for eight areas affecting complexion health and appearance: spots, wrinkles, color variation in the skin tone, pores, sun damage, subsurface pigmentation, vascular conditions, and porphyrins (evidence of bacteria in pores). Additionally, VISIA provides an informative comparison of your complexion's characteristics to others of your same age and skin type.

Your skin care professional uses this comprehensive information to plan the treatments and regimens which are optimal for you. VISIA's summary report provides a clear overview of your facial skin condition with your skin care professional's recommendations.

facial rejuvenation planning based on your unique complexion profile

VISIA imaging and analysis provide your skin care professional with the comprehensive data needed for a rejuvenation plan and skin care based on your specific complexion requirements.

Your VISIA analysis is the first step to achieving optimal skin renewal and the truly individualized care needed to maintain your complexion's most radiant health.

about VISIA Initially developed for skin care research, VISIA is now used worldwide in the health and skin care markets. VISIA is a product of Canfield Imaging Systems, the global leader in photo imaging systems for medical research and health care.

VISIA®

Uniquely you...

...VISIA® Complexion Analysis for facial rejuvenation and skin care

Now, through VISIA's in-depth analysis of your individual facial characteristics, it is possible to benefit from rejuvenation and skin care programs planned for **your** specific complexion.

identify your skin's condition—both surface & subsurface

The VISIA system's multi-spectral imaging and analysis provides a clear, multi-dimensional portrait of the individual aspects of your complexion which contribute to your overall appearance.

From measures of features such as texture and wrinkles to identifying sun damage, VISIA provides the most comprehensive means available for identifying all aspects of your complexion's health.

plan an individualized program based on your specific results

With VISIA's precise imaging of all areas affecting your complexion, your skin care professional can present the optimal rejuvenation options for your unique combination of facial characteristics.

renew & maintain facial vitality for lasting complexion health

Based on your complexion profile, your facial rejuvenation program will also include specific recommendations for ongoing skin care health. VISIA imaging is an invaluable aid in monitoring your complexion's vitality and checking effectiveness of your skin care regimen over time.
